

CECIL STRIKER

Thursday, August 26th at 7 PM

WEBINAR SERIES

Sponsored by The Henry R. Winkler Center
for the History of the Health Professions

“What Nineteenth Century Hospital Designers Knew about Minimizing Airborne Transmission and Why It's Been Forgotten”

Jeanne Kisacky uses her background in architectural design to inform her historical research into hospital design and how the built environment has influenced health and illness. A grant from the National Library of Medicine supported the writing and publication of her award-winning book, Rise of the Modern Hospital: An Architectural History of Health and Healing. She is currently working on extending her history of US hospitals to the 1960s, through the Hill-Burton era, the Cold War and Civil Rights.
