

Are you looking for exciting new activities for your library's summer reading program? The Armstrong Air & Space Museum can come to your rescue. We are your go-to solution for exciting, informative, hands-on programs!

The Museum can deliver any of these excellent, interactive programs at your locations.

Batman: Defying Gravity

Batman is always leaping off buildings to land safely on the ground. What is gravity? Why is it important? Children will experience several fun and exciting experiments to show how awesome gravity can be!

Superman: Look, up in the sky!

Superman needs a few things to help to keep him in flight—four to be exact! Children will learn about the four forces of flight and will construct their own paper airplane, paper copter, or kite. Then they can test their creations in our traveling wind tunnel!

Super Astronauts

Heroes are more than just comic book creations. Twenty-five real heroes grew up in Ohio and became astronauts! This program is all about those Ohioans who defied gravity, including the first man on the moon, **Neil Armstrong**. BONUS: one of our educators will visit your library dressed in an Apollo-style spacesuit.

Programs will last between 30-45 minutes and can be tailored for all ages of children. Additional programs are available for teens, adults, and families. Program fees are only \$50 plus mileage, and discounts are available for multiple bookings.

Contact the education staff at the Armstrong Air & Space Museum to book your program. Open spots will be gone in a flash!
